Paints and coatings since 1883

NAUTICAL LINE

THE RELIABILITY OF A LONG TRADITION PROVIDING SOLUTIONS TO THE CUSTOMER

Established in late 1883 (historical foundation) and handed on through generations, Industrie Bruno Stoppani R.P.S. Srl is still today an example of that Italian initiative of the entrepreneurial class always attentive to the market developments and keeping the sight to the advancing technologies. Producers of paints and specialties for the Professional Applicators in the coating industry for corrosion protection, with the philosophy of the quality for the product and the innovation as instruments to achieve our mission that is the full and complete satisfaction of every exigencies of each customer.

This aim, through the years,

allowed us to reach successfully important goals and appreciation on the national and international markets. The present position is the consolidation of the tradition with the historical affirmation of the brand STOPPANI, with the continuous investment in resources, in the constant elevated quality of the products and of the service, granting the reliability of supplies and the accuracy in deliveries. The specificity of use of our products combined with the attention given to the technical and economical components enable to meet most diversified exigencies, with a prompt and professional service in different market application: Industrial, Nauti-

cal and some Specialties. Millions of square meters of substrates coated through the years in most diversified ambient conditions and substrates, with our products: guarantee of efficiency and versatility which are our visiting card, our reference, our pride.

NAUTICAL LINE

A WIDE AND COMPLETE RANGE OF SOLUTIONS STUDIED TO VARNISH AND FINISH BOATS

More than 50 years creating coating solutions to protect, preserve and to enhance all types of boats: yachting, competition, work.

The long industrial tradition we represent and the deep knowledge of our work, our customer's satisfaction and the direct experience on field, are

our fundamental values allowing us not only to know but also to appreciate and to respect the magnificence of the sea in all shades, with our products for the preventive protection and the restoring of boats.

The marine environment is an ambient characterized by a critical and stronger aggression compared with other ambient systems. Through our products, the aim to reach is to preserve as longer as possible the efficiency of

the boats to maintain their performances: this goal is possible through a careful maintenance program and the use of highly performing coatings creating a physical barrier between the electrolyte (water and atmospheric steam) and the substrate to protect.

THE CONDITIONS TO GRANT AN EFFICIENT "BARRIER OR PASSIVE PROTECTION", IN INITIAL OR MAINTENANCE COATING, ARE

PERFECT KEYING TO THE SUBSTRATE

GOOD CORROSION PROTECTION EFFICIENCY

GOOD RESISTANCE TO WATER AND OXYGEN PERMEABILITY

REDUCED POROSITY TO AGGRESSIVE LIQUIDS AND GASES

LONG-LASTING RESISTANCE PROPERTIES IN SUCH AGGRESSIVE ENVIRONMENTS

All above requirements can be satisfied making the right choice of the coating system.

OUR SERVICE

Keying primers, one and two component

Guarantee good protection and perfect keying to the substrate in initial or maintenance systems applied on any boat surface made of most different materials: Steel, Aluminium, Wood, fiberglass, Gelcoat, Iron-Cement.

One and two component enamels

with glossy or mat effect, easy to apply, such as top-coats for initial or maintenance coating systems for all boat surfaces.

One and two component varnishes

With glossy or mat appearance, easy to apply as top-coats in initial or maintenance systems for all wood surfaces of boat even the most valuable ones.

Intermediates/ Undercoats one and two component

Provided with excellent compactness and film sandpapering, for initial or maintenance systems on all boats surfaces.

Two component epoxy fillers

With very low density and highly flexible to level small and large substrates, to fill or finish the substrate, offering excellent sanding.

Two component epoxy systems

For anti osmosis treatment of wood, fiberglass, gelcoat, initial or maintenance system.

Two component multi purpose epoxy system

to glue, impregnate, fill, etcetera.

Antifoulings

studied for highest performances in different use conditions: temperate or cold sea, salt or fresh water, fast or slow boat, always to contrast as much as possible the marine fouling growth, maintaining the roughness of the surface at minimum levels. Fouling affecting an immersed structure, causes weight and volume increases (even on cement and iron-cement structures) and if boats are concerned increases also the resistance during the movement causing loss of speed and extra fuel costs.
