# HIGH RESISTANCE VARNISHES TO PROTECT AND ENHANCE WOOD

Wood is one of the noblest materials par excellence that nature offers to human beings. It is a universal material, absolute protagonist in antiquity and still today indispensable raw material of great value, inexhaustible if obtained in a sustainable way from nature.

It has good characteristics of mechanical resistances (to compression, bending, etc.) and physical ones, variable between wood species. It is a "live" material reacting to the surrounding environmental conditions. Thanks to special products and treatments, it is possible to protect

and lengthen the durability saving all the performance and aesthetic characteristics, as well as functional ones, of this precious material. Non-pigmented varnishes create a transparent or translucent film and with UV filters also provide resistance to the yellowing action of sunlight

## THE CHARACTERISTICS OF OUR VARNISHES

Range of polyurethane paints, one and two-component, with a glossy or mat appearance depending on requirements. Perfect for applications on surfaces subject to high aggressions and requiring high resistance to marine environment.

- CUTTER
- STARSTOP
- KRISTALL

AESTHETIC FINISHES

VERSATILITY

MANY LIQUIDS PROOF thanks to superior chemical and physical qualities

ELASTICITY

GLOSS

SUPERIOR RESISTANCE to mechanical stress ant to the marine environment

FAST DRYING

ADHESION

EFFICACY OF PROTECTION against adverse weather and atmospheric agents even in critical conditions
